

Pivot Table & Charts Assignment

Assignment Questions

Easy Level

Q1. What is the purpose of a PivotTable in Excel?

Ans- A PivotTable is used to summarize, analyse, and reorganize large amounts of data quickly without changing the original data.

Q2. Create a PivotTable to show Total Sales by Region.

Ans- To create Total Sales by Region, insert a PivotTable, place Region in Rows and Sales in Values.

For practical answer check attached excel sheet

Q3. Apply Conditional Formatting to highlight sales greater than 400.

Ans- Select the Sales column → Home → Conditional Formatting → Highlight Cells Rules → Greater Than → enter 400.

For practical answer check attached excel sheet

Medium Level

Q1. Explain the difference between Sorting and Filtering with an example from this dataset.

Ans- Sorting arranges data in a specific order, while filtering displays only the required data based on conditions.

For practical answer check attached excel sheet

Q2. Create a PivotChart showing Monthly Sales Trend.

Ans- Insert a PivotTable, place Date in Rows and Sales in Values, group Date by Month, then insert a Column PivotChart.

For practical answer check attached excel sheet

Q3. Use a Slicer to filter data by Product and observe changes in sales.

Ans- A slicer is used to interactively filter PivotTable data. Selecting a product in the slicer updates sales values instantly.

Hard Level

Q1. Why are Dashboards important for decision-making in business analysis?

Ans- Dashboards are important because they convert raw data into clear, visual insights, helping managers and analysts make quick and informed decisions.

Key reasons

1. **Quick understanding of performance**
Dashboards present KPIs those can be (sales, profit, growth, trends) in charts and indicators, making performance easy to understand at a glance.
2. **Real-time or up-to-date insights**
Decision-makers can track current business conditions and respond faster to issues or opportunities.
3. **Better comparison and trend analysis**
Dashboards help compare regions, products, or time periods and identify patterns or trends.
4. **Faster decision-making**
Visual summaries reduce the time needed to analyze large datasets manually.
5. **Improved communication**
Dashboards provide a single, consistent view of data, improving alignment between teams and management.

Business example

A sales dashboard showing monthly sales by region and product helps managers quickly decide:

- Which region needs attention
- Which product is underperforming?
- Where to increase marketing or inventory

Q2. Create a Dashboard that includes:

Sales by Region (PivotTable + Chart)

Product Filter (Slicer)

Monthly Trend (Line Chart)

Ans- Please Check the Attached excel sheet

Q3. Group dates in the PivotTable into Months and calculate the average sales per month.

Ans- Place Date in Rows and Sales in Values, group Date by Months, and change Value Field Settings to Average

*Please Check the attached excel sheet for practical answer

Q4. Combine Apples and Oranges into one group called Fruits and compare its sales with other products.

Ans- Apples and Oranges are grouped using the Group option in a PivotTable and renamed as Fruits to compare their combined sales with other products.

Optionally added a pie chart as well so that the comparison become easier
